

Stock Chart for AEM Holdings

Looking at past breakout patterns, if closing price represented by the **orange line** is on an upward trend and meets the 25 day MA represented by the **blue line**, the stock tends to rally as shown in the green arrows

Hence, a simple trade is to long stock when closing price is about to meet 25 day MA.

Examples of a trade I made on by Vickers Accounts on 30 Jan 2020 represented by **green circle** which made ~8%.

Symbol	Stock Name	Action	Mkt	Settlement Mode	Qty	Avg Price	Original Value	Last	Mkt Value	Profit/Loss in SGD	Profit/Loss %
AWX	AEM	Buy Sell	SG	Cash	6,000	1.9567	11,740.200	SGD 2.120	12,720.000	979.800	8.35

In fact, more recently in late March this year, if the same strategy was used, you would have made ~20% on just this one single trade as shown by the **blue arrow** based on Monday 20 April close price of 2.12 SGD.
